We contribute to the sustainable development of the forestry sector, focusing on the generation of employment and added value.

Also ...

- ❖ Forestry roads inventories and spatial analysis.
- ❖ Paraguay National Forestry Inventory (AIFN-HDS).
- ❖ etc

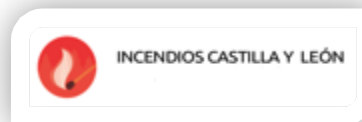

One of our objectives is to promote forest products through the use of pioneer but easy-to-use Information Technologies.

We perform many IT projects based on open-source technology to help in planning and management processes, forestry products commercialization, renewable energies and recreational uses.

Also...

- ❖ ECOWAS Renewable Energies Indicators sytem
- ❖ Mobile devices inventories and tasks management tools
- ❖ Web applications for forestry products commercialization

Cesefor has an experienced professional team in wood products innovation and structural use. We have a workspace for wood tests, providing services to many companies and organizations.

Also ...

- ❖ Mechanical characterization of wood products
- ❖ Wood products biomass and CO2 characterization
- ❖ Wood structures analysis support
- ❖ Carpentry products support
- ❖ Quality control in works around wood materials

We do research to understand the reality of our sector and study how to improve it.

Conservation and restoration of mediterranean *Taxus baccata* woods in the Cantabrian Mountains

The conservation of natural resources and the sustainability of economic activity in the forestry and environmental sector are our principles.

We believe in coaching the whole value chain stakeholders, playing a key role in Networking and Cooperation projects.

Inadequate information is one the forestry sector weakness. That is why we bet to work on strict information and data.

Thank you for your attention!
